

1. Problem and its related SDGs

Impulsive pet adoptions are rising in Indonesia and globally. Inexperienced owners underestimate the demands of animal care. Many believe pet ownership requires only feeding and bathing. This lack of education causes inconsistent care and preventable health issues. It leads directly to high rates of animal abandonment. Communities need an accessible tool to guide new owners through responsible pet ownership.

This application addresses the crisis by advancing two Sustainable Development Goals. The platform supports SDG 4 Quality Education by teaching animal welfare principles. It delivers the exact knowledge required to maintain consistent care routines. The tool also advances SDG 15 Life on Land. Abandoned domestic animals disrupt local ecosystems and hunt native wildlife. Educating owners reduces abandonment rates. This intervention keeps pets secure and protects regional biodiversity from untamed pets.

2. Features

1. Intelligent Care Schedules

Automatically creates a customized daily routine (feeding, grooming, vet timelines) based on the pet's age, breed, and species to keep inexperienced owners on track.

2. Zero-Friction Safety Queries

Prevents accidental poisoning by allowing owners to cross-reference food ingredients or household items using voice control or a home screen search swipe.

3. Puskesmas & Pet Care Radar

Eliminates panic during emergencies or travel by mapping nearby affordable, government-subsidized Puskesmas clinics, 24/7 emergency rooms, and local boarding options.

4. Frictionless Action Logging

Tracks daily care consistency and active play times across household members without creating high app-interaction friction.

5. Tropical Hydration Alerts

Protects confined indoor pets from severe heat exhaustion and dehydration during extreme dry seasons (musim kemarau).

6. Active Recall Flashcard

Delivers daily, digestible micro-insights, practical care hacks, and surprising fun facts tailored to the pet's specific species and life stage to keep owners continuously educated without cognitive overload. The user gets a single, beautiful "Did you know?" card each day

3. Selected Devices

- iOS
- Apple Watch OS
- iPadOS

4. Tech Stack

- **Core Language & UI:** Swift 6 & SwiftUI
- **Architecture:** MVVM (Model View ViewModel)
- **Persistence:** SwiftData (Local Storage)
- **Testing:** XCTest for unit testing business logic and ViewModels.

- **System Integrations (The Apple Technologies):**

- App Intents Framework & SiriKit:**

- Exposes core app actions (like toxicity checking) directly to Siri voice queries, system Shortcuts, and system actions, utilizing AppEntity to bridge local SwiftData models with global system queries.

- CoreSpotlight Indexing:**

- Deeply indexes the internal safe/toxic food database into the native iOS system search, allowing users to type ingredients directly on their Home Screen and receive instant results.

- WidgetKit:**

- Visualizes glanceable, customized schedule widgets directly on the iOS Home Screen and iPadOS Lock Screen.

- ActivityKit (Live Activities):**

- Powers persistent, real-time countdown visualizers on the iOS Lock Screen and Dynamic Island during active 20-minute indoor play sessions.

- MapKit & CoreLocation:**

- Manages user geolocation to fetch, calculate distance, and cleanly render interactive map views with custom point-of-interest annotations for nearby Puskesmas clinics and pet hotels.

- WeatherKit:**

- Dynamically tracks hyper-local, real-time outdoor temperature metrics based on device coordinates to automate climate safety parameters.

- UserNotifications:**

- Coordinates daily recurring care schedules and handles smart background notification triggers to dispatch immediate safety warnings during extreme tropical heatwaves.
